

Lakeside Park

CLIENT: City of Mississauga

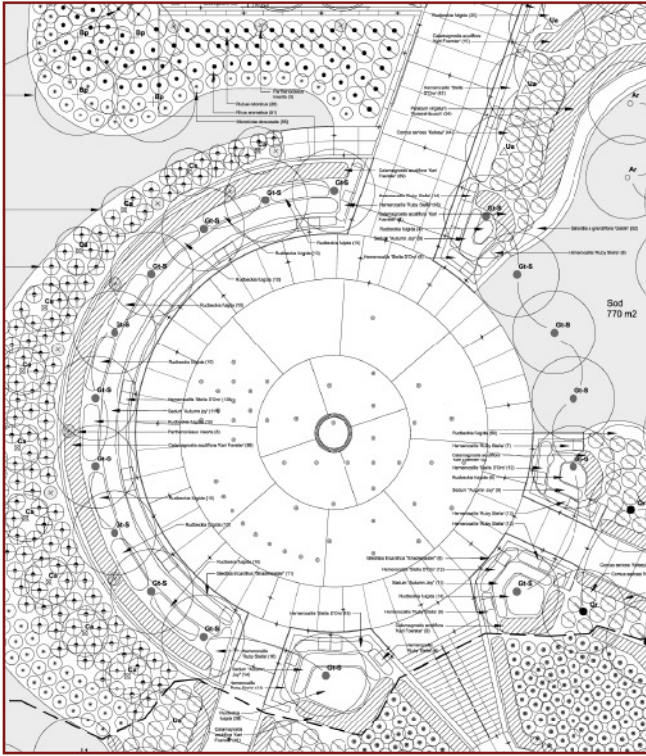

PROJECT CONSULTANTS: Sub-consulting for
J. George Associates

The City of Mississauga was seeking to develop a “green showcase” park through the redevelopment of Lakeside Park. It was an exciting design opportunity to achieve a modern waterfront park that showcases the existing natural capital and developing green initiative opportunities.

Lakeside Park is located on the Lake Ontario waterfront in an area with a strong industrial history. Over recent years the park has become a recreational amenity for the local community with its waterfront trail, off-leash dog area, and extensive green space. The two woodland remnants on the site provide habitat for urban wildlife and migratory birds. The concept for the redevelopment was to build on the recreational aspect of the park while protecting and enhancing the natural features.

Dougan & Associates (D&A) as part of the J. George & Associates Team, provided ecological site characterization and restoration design input to the development of the Lakeside Park Detailed Design. D&A were in charge of the planting design for this site from concept development to the preparation of detailed construction drawings.

This project was awarded the 2013 MISSISSAUGA URBAN DESIGN AWARD OF EXCELLENCE in the Industrial Category.
