

Memorial Park

CLIENT: City of Mississauga

PROJECT CONSULTANTS: John George Associates (lead), Dougan & Associates, and other technical sub-consultants.

A former landfill site, Memorial Park has been transformed into a large scale waterfront park that features a major children's play facility built on the theme of the downtown core of Port Credit, a special events Pavilion, and ecological restoration of both the shorelines of the Credit River and park proper.

Dougan & Associates provided terrestrial ecology expertise and identification of natural restoration opportunities for this lakeshore property. Assessment included the use of nearby reference lakeshore ecosystems and collaboration with coastal engineers to develop workable and site appropriate restoration communities.

This project is a 2007 Mississauga Urban Design Awards winner.
